

# CENTRALIZE YOUR QUALITY DATA

## with Presage Analytics

Presage provides a centralized database that makes it easy to standardize configuration across multiple facilities. Maintain one set of analyses, and ensure everyone is following one authoritative quality process. Enter standards and specifications once per product, saving time on configuration and data entry.

Reporting can also be collated across multiple plants. Use our QA Scorecard report to compare nonconformances across your plants, or use our comprehensive data search to view specific, detailed data from across your quality program.
